### HOW TO REPLY TO THIS NOTICE:

#### I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

## **DETAILED ACTION**

### ***Response to Amendment***

Applicant's amendment clarifying the units of the solubility parameter  $\delta$  to MPa<sup>1/2</sup> in the instant claims has been noted. Applicant cites support for this amendment from a document referenced in the instant specification (CRC Handbook of Polymer-Liquid Interaction Parameters and Solubility Parameters by Allan F.M. Barton; see page 12, lines 1-4 of specification).

In response to this amendment, the objection to the specification has been withdrawn.

In response minor informalities in Claim 33, applicant's amendment has overcome the issue of minor informalities (insertion of a space), and the objection to claim 33 has been withdrawn.

Clarification of the units for the solubility parameter ( $\delta$  MPa<sup>1/2</sup>) has overcome issues of indefiniteness. The rejection of claims 17-39 under 35 U.S.C. § 112, second paragraph for failure to particularly point out and distinctly claim the subject matter which applicant regards as the invention have been withdrawn.

### ***Allowable Subject Matter***

The following response is directed to the document entitled "Remarks/Arguments" (pages 10-20) received August 27<sup>th</sup>, 2010.

Claims 17, 19-29 and 31-39 are allowed.

The following is an Examiner's statement of reasons for allowance:

With respect to the mass-continuous process (claim 17) and the mass-suspension process for the preparation of rubber-reinforced vinyl aromatic copolymers, *Demirors* (USPN 6,545,090) is the closest art of record. *Demirors* teaches mass-continuous processes (*Demirors* col. 2, lines 55-68) and mass-suspension processes (*Demirors* col. 5, lines 25-30) for the preparation of vinyl aromatic polymers containing rubbery, bimodal filler materials, interpreted to have the "core-shell" and "salami" morphology of the instant claimed invention.

The primary difference between *Demirors* and the instant claimed invention is the requirement that the difference in solubility parameters between the "core-shell" particles ( $\delta_1$ ) and the "salami" particles ( $\delta_2$ ) possess a solubility difference of  $\geq 0.5$ . In *Demirors*, the "core-shell" (smaller) and "salami" (larger) particles appear to have identical vinyl and 1,3 conjugated diene content (*Demirors* 3:58-4:55), necessitating a solubility difference of zero; a solubility difference  $\geq 0.5$  requires the monomer content to have a different compositional makeup in each particle. *Demirors* lacks a teaching or suggestion to change the ratios of constituent monomers in the rubbery particles such that a solubility difference between the particles of  $\geq 0.5$  occurs.

With respect to the feature of "core-shell" and "salami" particles possessing a solubility parameter difference  $\geq 0.5$ , *Echte* (USPN 4,493,922) shows particles reading on applicant's claimed "core-shell" and "salami" particles (*Echte* col. 1, lines 40-55). At the extremes in *Echte*, the particles of *Echte* appear a difference in solubility parameter  $\geq 0.5$ , as calculated on a weight-average basis by the Examiner (see Non-Final Action,

Art Unit: 1767

pages 6-7, mailed May 27<sup>th</sup>, 2010). However, applicant has argued persuasively (pages 16-17) that this calculation relies on assumption, and furthermore, applicant argues persuasively (page 15) that the claims as presently amended are drawn to mass-continuous and mass-suspension processes (which entail polymerization of the vinyl aromatic resin in the presence of the particles), whereas *Echte* is drawn to a blending process (the vinyl aromatic polymer matrix is pre-formed before contact with the rubbery particles).

The prior art of record does not indicate to a person having ordinary skill in the art that the combination of rubbery particles having a solubility difference  $\geq 0.5$  and the recited size/monomer content would be beneficial for inclusion in mass-continuous and mass-suspension processes for the preparation of reinforced vinyl aromatic copolymers.
